PROFESSIONAL SUMMARY

Engineering leader with 27+ years delivering secure, scalable software for Navy, Air Force, and Marine Corps customers — from hands-on systems code to leading a 50-engineer organization and winning $250M+ in contracts. Currently a Cloud Infrastructure Engineer at SAIC supporting Navy programs, and directing AI coding agents through a disciplined issue-to-merge-request workflow to ship production systems (Cloudflare edge, AWS ECS/EKS, Kubernetes GitOps) in days and weeks rather than months. AWS DevOps Engineer Professional.

CORE SKILLS

Leadership: Engineering org build, Scrum/SAFe roadmaps, stakeholder alignment, hiring and mentoring

Architecture: Microservices/pub-sub, cloud-native AWS, Kubernetes, Zero Trust / C-ATO, system-of-systems

AI-augmented engineering: Agentic SDLC (issue → branch → reviewed MR), multi-agent worktrees, MCP, custom agent tooling

DevSecOps: CI/CD, IaC, automated testing, DISA STIGs, IATT, security-evidence registers

Cloud & platforms: AWS (ECS Fargate, EKS, S3/CloudFront, CDK, EC2, IAM, SSM), Terraform, Helm, Ansible, Argo CD

Languages: Python, Java, JavaScript/TypeScript (Vue 3, React, CesiumJS), C/C++, Bash

Tools: GitLab/GitHub, Jenkins, Docker, SonarQube, Fortify, Playwright, FastAPI, Cloudflare Workers/D1/R2

EXPERIENCE

Cloud Infrastructure Engineer | SAIC | San Diego, CA — **April 2026 – Present**

- Design and deploy AWS cloud infrastructure for DoD Agile software teams supporting Navy programs, using Terraform, Helm, and Ansible.
- Provision and manage Kubernetes container environments inside a secure DevSecOps software factory.
- Support hybrid cloud / on-premise connectivity aligned to Zero Trust architecture and DoD C-ATO requirements.
- Work inside SAFe Agile teams delivering cloud-native solutions for Navy C4I modernization.

Independent AI-Augmented Engineering | Selected 2026 projects — **2026**

- Direct AI coding agents through an issue → branch → merge-request SDLC with human review on every change — 1,400+ commits and 390+ reviewed MRs across five production projects in 2026.
- SAFe Portfolio Simulator — ~70K-line Python platform that bootstraps and analyzes Scaled Agile portfolios on GitLab (WSJF, flow metrics, Vue 3 / FastAPI console, JQL-style query with temporal operators, compliance evidence register); one-command deploy to ECS, EKS, or S3/CloudFront via CDK. 970 commits, 254 MRs.
- Channel Surf TV — Cloudflare-native worldwide surf atlas (Astro, Workers, D1, R2) taken to production in ~4 days. 249 commits, 105 MRs.
- Kubernetes GitOps platform — Terraform + Ansible + Argo CD on ephemeral kubeadm/EC2; boxes configured over SSM with no inbound ports; MFA-gated operator path. 159 commits, 34 MRs.
- Agentic Dev Toolkit — versioned skills, slash commands, and hooks; CI-gateable code-health quality gates; architecture explorer; session handoff and hours/MSR automation; self-syncing agent config across machines.

Landlord, Property Manager | San Diego, CA — **November 2023 – April 2026**

Director of Engineering | GALT Aerospace | San Diego, CA — **February 2019 – November 2023**

- Partnered with DoD stakeholders (including Marine Corps Warfighting Lab) to set engineering vision and roadmaps; helped win $250M+ in contracts, including the $35M+ SkyTower II airborne C3 award against major primes.
- Grew the software engineering organization from ~7 to 50 — hiring, mentoring, and running Scrum execution across software, networking, systems, mechanical, and electrical.
- Stood up DevSecOps from scratch: Jenkins CI/CD, Bitbucket/Git, Ansible/Python/Bash automation, SonarQube, Selenium/PyTest, and automated DISA STIG compliance that supported multiple IATT accreditations.
- Hands-on architecture and code for airborne comms status/control on a Python / Redis / Vue 3 / Docker microservices pub-sub stack; systems went through successful DoD flight tests on FINN.

Software Engineer / Software Team Leader | Northrop Grumman | San Diego, CA **January 2009 – December 2018**

- Led ~15 developers on the BACN Information Broker (BIB) — a web situational-awareness and mission-planning app (React/Redux/Backbone/CesiumJS, Python, Java, Elasticsearch) — delivering three major baselines ahead of schedule.
- Implemented CI/CD, automated testing (Mocha, JUnit, PyTest, Selenium), and vulnerability management (Fortify, STIGs) through three cybersecurity upgrade cycles.
- Hands-on payload and data-link work across Link 16, CDL, EPLRS, SADL, VOIP, and Inmarsat on the E-11A airborne gateway ($3.6B IDIQ; 200K+ combat flight hours; 98%+ mission availability).
- Supported forward-deployed install and upgrade of BACN ground and airborne assets worldwide (full-time field support 2009–2013; periodic 1–7 month trips 2015–2018).

Software Engineer | Northrop Grumman | San Diego, CA **January 2005 – December 2008**

- Team leader (~20 developers) on the Joint Effects Model — web-based CBRN modeling and simulation for DoD commanders (Fortran, C/C++, Java, JSP, JavaScript on Windows and Solaris).
- Ported JEM into GCCS-J and GCCS-M and administered the associated Windows domain and Solaris infrastructure; regular Virginia/DC customer integration travel.
- Led development of an automated test framework for ongoing JEM quality assurance.

Software Engineer | Predicate Logic Inc. | San Diego, CA **April 1999 – April 2005**

- Full-lifecycle integration of the SLVR submarine LF/VLF VME receiver into the Integrated Resource Manager — C on HPUX, Berkeley sockets, SNMP, Neuron Data GUI.
- Took over TychoMetrics mid-stream and drove ~2–3 years of improvements, including the redesign from Visual C++/MFC (Versant OODB) to a web ASP.NET/C# application.
- Built custom metrics extract/transform pipelines (Perl, UNIX shell, ADO.NET) against SQL Server, Oracle, Access, XML, and Doors; OLE-automated Excel reporting.

KEY ACCOMPLISHMENTS

- Scaled GALT engineering from ~7 to 50 and helped win $250M+ against industry primes, including the $35M+ SkyTower II airborne C3 award.
- 13 years at Northrop Grumman on BACN (airborne gateway, $3.6B IDIQ, 200K+ combat flight hours) and JEM/GCCS CBRN modeling.
- In 2026 earned AWS DevOps Engineer Professional, CloudOps, Cloud Practitioner, and CompTIA Security+, and shipped 1,400+ reviewed commits of production software via AI-augmented engineering.

EDUCATION

M.A.S., Architecture-Based Enterprise Systems Engineering | UC San Diego **2014**

B.A., Cognitive Science and Music | UC San Diego **1999**

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional · Amazon Web Services · April 2026
- AWS Certified CloudOps Engineer · Amazon Web Services · February 2026
- AWS Certified Cloud Practitioner · Amazon Web Services · February 2026
- CompTIA Security+ · CompTIA (DoD 8570/8140 IAT Level II) · February 2026
- Certified Kubernetes Administrator (CKA) · CNCF / Linux Foundation · In progress

PROFESSIONAL DEVELOPMENT

- Completed AWS DevOps Engineer Professional (Apr 2026) after CloudOps, Cloud Practitioner, and Security+ in February 2026 — Skill Builder labs plus production AWS/Kubernetes work, not credential collecting.
- Preparing for the CKA performance exam (cluster lifecycle, networking, storage, troubleshooting) while already shipping kubeadm and Amazon EKS platforms.
- Building a personal agentic-engineering platform — custom skills, quality gates, MCP integrations — used on every 2026 project so AI-built code is held to the same review and CI standard as hand-written code.
